The National Center for Patient Safety reports over 50% of inpatient suicide attempts and completions involve bed linens. So we introduce “THE BEDDING SYSTEM” and “THE BI-FOLD PILLOW”

**PATIENT SAFETY AND COMFORT**

The Bedding system is designed to create a therapeutic environment with comfortable bed linens that are both esthetically pleasing as well as functional.

We find that patients that use our bedding are appreciative and take pride in keeping their surroundings tidier. By cutting the corners of the top quilt and the eliminating the sheets, making the bed is truly a simple chore that even patients with cognitive and physical disabilities can complete. To ease the patient bed making process, the staff only needs to fit the bottom quilt sheet to the mattress.

**VETERAN PSYCHIATRIC PATIENT COMMENTS**

“If I could buy one for my home I would.”  
“This is a great addition to my stay.”  
“The blanket is great. When I go to the restroom at night it’s still warm when I return.”  
“The old sheets were too thin and the vinyl mattress would make me sweat, the quilted bottom does not do that.”  
“It inspires me to keep my bed made.”  
“Making my bed couldn’t be easier, housekeeping probably likes this.”  
“I wish I had this in boot camp. You don’t have to tuck any corners!”

**MISSION STATEMENT**

Harm Reduction Solutions strives to become the leading national company exclusively dedicated to the prevention of suicide and self-harm. We develop innovative products that improve and safeguard the therapeutic psychiatric and patient environment. Harm Reduction Solutions strives to develop the most advanced, beneficial patient care products.

The National Center for Patient Safety reports over 50% of inpatient suicide attempts and completions involve bed linens. So we introduce “THE BEDDING SYSTEM” and “THE BI-FOLD PILLOW”
The Bedding System was designed by a Registered Nurse to overcome the issue of patient safety created by standard linens. The Bedding System linens are not only safer than standard linens, they are designed with patient comfort in mind, creating a therapeutic environment that is both comfortable and esthetically pleasing. Even when elevating the level of patient safety, we receive patient feedback that the bedding gives users a comfortable, at-home feel and promotes a calm and soothing environment. This higher level of patient comfort and less institutional approach promotes a more stable environment to aid in the healing process.

The Bedding System features:
- One-piece design linens
- No dangerous sheets, pillowcases or pillow vinyl are used
- Quilted material is safer
- Linen contributes to a therapeutic environment
- Keeping the bed made is easy

The Safety of the Bedding

The quilted material creates a thicker, less lethal lanyard that makes it difficult to create a hanging device. The quilted top cover is completely sewn to the quilted bottom creating one piece design. This one-piece design creates bedding that is not only difficult to use as a hanging device, but would also draw attention if removed from the bed by a patient.

The ivory custom quilted fitted bottom creates a snug fit to the mattress. This creates bedding that is large enough for a patient to remove, but also still easy enough for staff linen changes.

Every seam in the bedding system has been designed to deter patients trying to tear or rip the bedding apart. Because of this, we use specialized stitching such as double stitch, blind stitch, lock stitch, and bar tacks (using two or three in certain areas).

Stitching is done with sturdy polyester thread that has been tested to allow durable quality products, and at the same time not strong enough that the thread could be used by a patient to harm themselves or others.

Riley Bi-Fold Pillow

The Bi-Fold Pillow is designed to be a one-piece pillow used without a pillowcase. By eliminating the pillow case, the bedding system has reduced another possibility for a patient to harm themselves in an inpatient setting.

The one-piece pillow allows for easy laundry cleaning, with special woven stuffing that is compartmented into two individual pillow halves, creating the Bi-Fold Pillow. Compartmented stuffing resists clumping and allows for multiple washings, reducing the risk of infection.
